

REGISTRATIONS AND CERTIFICATES

1.0 Registrable Plant

1.2 Plant Registration

Plant requiring registration includes;

- 1 Air-conditioning Units (see definition below);
- 2 Specified Amusement Devices other than coin operated amusement devices(see definition below);
- 3 Cooling Towers (see definition below).

Schedule 2 of the [Workplace Health and Safety Act 1995](#) states that an air-conditioning unit is a unit of plant that provides air-conditioning and that either:

- a. Incorporates a cooling tower; or*
- b. Consists of 1 or more compressors and the power rating required for operation of the air-conditioning unit is 50 kW or more.*

Air-conditioning units and cooling towers are not covered by the national standard. In Queensland's environment there are strong policy grounds such as increased risk of legionella disease, for this type of plant to be registered.

All air-conditioning units that require a power rating of 50kW or more to operate are required to be registered in Queensland, even if there are 1 or more compressors required to operate the unit.

Note: An owner of registrable plant must not use, or allow use of, registrable plant unless the plant is registered. Change of ownership of registrable plant must be notified to Workplace Health and Safety Queensland.
